WATERING DIRECTIONS FOR NEW SOD

1. First Watering (Right After Installation)

Water the sod for about 2 hours so the water soaks all the way through the sod and into the soil below.

2. Daily Watering – First 2 Weeks

Water every day for about 1 hour.

The goal is to keep the sod consistently moist, not muddy.

Watch the edges:

- If the edges start to brown or curl, the sod is drying out.
- Water immediately if you see this.

3. After 2 Weeks – Begin Tapering

- Water every other day for one week.
- Then continue tapering based on weather.
- During hot or dry summer weather, water more often.

4. First Mowing

- Mow when the grass reaches about 4 inches.
- Set mower to 3 inches, removing only 1 inch.
- Always mow when the grass is dry.

5. Best Time to Water

Water in the morning for best results and to reduce disease.
